Participant Details

dott. Nicola LEONE
CEO

Side Event, Wednesday

- Opening ceremony at exhibition ground

Workshop, Thursday

- Insight out - the sense of open innovation
- Elevator Pitch

Bilateral Meetings - Friday

- B2B (Friday, 10:30 - 12:30)
- B2B (Friday, 13:30 - 16:00)

Organisation Details

Industrie Manifatture Ercolino Srl offers solutions for manual goods handling. The first, prototype version of Ercolino trolley dates back to 2001 and has been improved ever since, arriving at the current versions of Ercolino Domestic trolley e Ercolino Industrial trolley. The solutions offered can be applied in a wide variety of sectors, ranging from domestic use through crafts up to industrial goods handling. The highly professional team of Industrie Manifatture Ercolino is engaged in mechanic and electric design, software development, technical services as well as methodology and research studies.

Areas of Activity

Manufacturers

- Industry

Production and Development

- Sales & marketing

Cooperation Profiles

Offer: Searching for a partner to produce and market a patented trolley for moving goods

Description

Moving goods manually can be tiring, especially if the goods are heavy and/ or bulky. Manual goods handling activities often require postures and behaviors which physically traumatize our body, forcing its extreme flexions, inclinations or rotations. Loads lifting above the shoulder level shifts our balance; walking with weights and volumes results in an unnatural posture of the human body.

The **multi-purpose trolley Ercolino**® adopts an **innovative, patented system** for goods handling. This practical solution occupies only 50 cm in diameter and is 6 cm thick and can carry up to 150 kg of any size. If the dimensions of the load to be carried exceed the dimensions of the trolley bag, the bag itself can be reduced, creating a platform where the cargo can be easily placed. The wheels can be attached and removed with a light pressure.

The trolley for goods handling Ercolino is essential in all situations of manual handling of all types of goods (of small, large and very large dimensions) and in multiple types of situations and spaces (in a supermarket, on a street, at home, in a garden, while riding a bicycle or driving a car).

The Ercolino trolley has been granted a European Patent: we currently seek **partners to produce and market** this universal goods handling solution.

Co-operation Type:

Offered: Research co-operation

Offered: Technical co-operation

Offered: License agreement

Requested: Manufacturing agreement

Requested: Sales / Distribution

Requested: Investment/Financing
